	DDM166	1.66" O.D. Mast
	DDM238	2" STD. I.D. Mast 2 3/8" O.D. Mast

The DBS Tower Mount for 25G towers is one of the latest additions to the complete line of ROHN antenna support products. Other receive antenna mounts include gable end mounts, tripod mounts, telescoping masts, towers, wall brackets, and non-penetrating roof mounts.

The mount goes together quickly, with a minimum of bolted connections. The angle steel cross members connect directly to the tower legs with easy-to-use u-bolts.

This mount is either available in a hot dip galvanized or pre-galvanized finish.

Disassembled, the lightweight **UPS Shippable** mount stores in very small spaces with the angle members nested.

Varied mast diameters are available to provide for mounting most current DBS dishes.
